

EVERY DROP COUNTS.

Each drop of the crude oil you handle is a little piece of your profit. So make sure you're getting it all – and keeping it all – with the OilFlux™ suite of up, mid, and downstream production and flow stream additives.

OilFlux™ additives feature revolutionary new chemistry which is incorporative, non-evaporative and anionic/nonionic technology for better yield and safer, faster performance.

OilFlux™ “building block” method allows users to customize and add features, such as increased fluidification and drag reduction, and even mix in additives to aid in wax/paraffin separation, asphaltene inhibiting, breaking crude oil-water emulsion, cleaning and recovery of crude oil, and solving all 15 profit robbing “pain points.”
